

Future Proof Maintenance

Micro Drainage maintenance provides the end user with both technical support and software upgrades, with no hidden extras.

Keep Up To Date

Keeping your maintenance up to date will ensure that you are working with the latest industry standard software, developed to satisfy the ever changing regulatory requirements.

Existing modules continually evolve and new ones are generated to comply with these industry advances.

Micro Drainage software is also developed to keep pace with the latest technological developments, ensuring that you gain the maximum performance when upgrading your hardware or software systems, to provide a solid foundation for the future.

Peace Of Mind

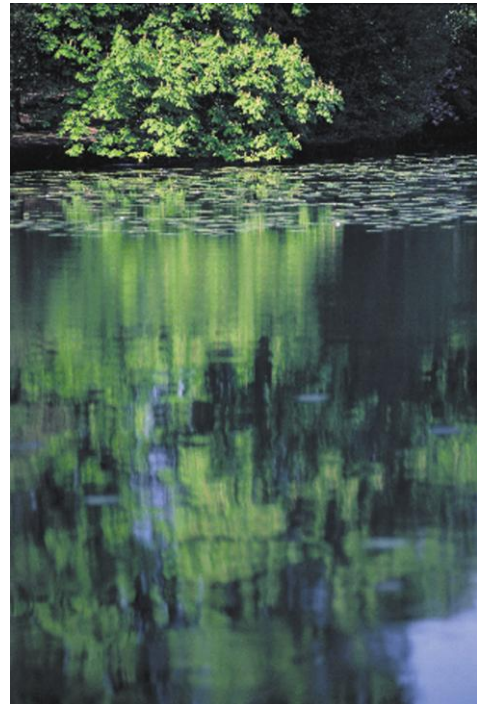

Micro Drainage developed the first drainage design suite for the PC and is the only drainage engineering software company certified to EN BS ISO 9001 and TickIT standards.

The scheme will provide you with access to comprehensive technical support, by phone or email, throughout the working week. This highly valued support is supplied by a team of professionals involved in the research and development of the software.

With 'Future Proof Maintenance' you have peace of mind to know that your software is current and can always deliver to its maximum productive potential.

Your investment is protected and continually enhanced with regular, free software updates.

Micro Drainage maintenance will help facilitate your organisation to satisfy the need for Sustainable Drainage Systems (SUDS) today and in perpetuity.

Summary Of Benefits
